

# If you had COVID-19... ...you still need a vaccine!

**1** If you already were sick with COVID-19, you are **two times** more likely to get COVID-19 again if you are unvaccinated

**2** Getting the COVID-19 vaccine will **help protect you from serious infection and hospitalization** from COVID-19

**3** The protection you gained from getting sick with COVID-19 **decreases over time**, so you need a vaccine to give you greater protection
